

Swan Hills Treatment Centre

Operated by:  EarthTech

Key Differentiators

- Fully integrated hazardous waste treatment facility. Processes include incineration, stabilization, physical/chemical treatment, hazardous waste landfill and deep-well injection.
- One rotary kiln incinerator on site with total nominal capacity of 40,000 metric tonnes per year.
- Destructive removal efficiency (DRE) of 99.9999% or better. Licensed to 99.9999% efficiency (TSCA operating approval), the plant typically achieves DRE's of 99.999999%.
- Capable of treating a wide variety of waste streams excluding pathological, explosive, mercury and radioactive wastes. We are the only facility in North America licensed to treat and dispose of Dioxin and Furan wastes.
- Complete assumption of liability once waste is accepted at the plant. (Backed by the Alberta Government)
- Certificates of destruction issued once waste is destroyed.
- Environmental health and safety are number one priorities at the SHTC. The SHTC enjoys world class environmental monitoring and compliance and world class health and safety records.
- The Swan Hills Treatment Centre is fully supported by neighbouring communities and stakeholders.
